### **Where building services technology becomes a system: ISH 2027**

Whether in high-density housing or in public and commercial buildings, the demands placed on building services technology are increasing. Sustainability, efficiency and digitalisation require solutions that take a holistic approach to water, heating and air. As a central platform, ISH is responding to this development and will focus on practical solutions and innovative concepts in Frankfurt am Main from 15 to 19 March 2027.

As the world's leading trade fair for HVAC + Water, ISH is the international meeting point for skilled tradespeople and industry, planners and engineers, architects and designers, the construction and real estate sectors, as well as municipal decision-makers. Under the motto "The Power of Solutions", ISH demonstrates how individual technologies can be combined into integrated, effective systems.

The focus is on eight solution fields that structure the exhibition and provide guidance: Bathrooms, Water-Bearing Systems, Installation, Heat Generation, Indoor Air, Intelligent Building Management, Software and Sanitary & HVAC Production.

Two special areas highlight key themes. "Green Roofs & Facades" demonstrates how green infrastructure, rainwater management and energy efficiency interact. With "Pools & Spas", ISH showcases sustainable solutions for private wellness areas, public swimming pools and hotel facilities – from energy-efficient water technology and hygiene to comfort and design.

A varied programme of events complements the exhibition and promotes knowledge transfer, dialogue and networking across the entire value chain.
